

Deadline of Submission of Comments: 26-Sep-23

Document Number: ANSI/ASB Std 180

Document Title: Standard for the Use of GenBank for Taxonomic Assignment
of Wildlife

#	Section	Type of Comment (E-Editorial, T-Technical)	Comments	Proposed Resolution	Final Resolution
1	5.1	E	Confusing as now written. Last two parts (re. 5.5 and 5.6) seemed tagged on	Rewrite so it makes sense. For instance, the "and whether the hit..." part reads like it should be the end of the sentence (which it previously was)	Accept. CB confirms that the resolution does not change the meaning of the sentence.
2	5.2c	E	Awkward as now written. Does not really follow from 5.2	Perhaps moved added text to ewnd of sentence ("if from a protein coding region.")	Accept. CB confirms that the resolution does not change the meaning of the sentence.
3	5.4.2c	E	Not sure what "location" now means. I assume "collection location" was meant to mean where (the place) the sample came from. Now it reads like it is its current location.	Perhaps change to " location from where the sample (or specimen) was originally collected:	Accept. CB confirms that the resolution does not change the meaning of the sentence.
