Foreword

This document contains a list of terms and definitions to be used by the Toxicology Consensus Body of the American Academy of Forensic Sciences (AAFS) Academy Standards Board (ASB) and the Forensic Toxicology Subcommittee of the Organization of Scientific Area Committees (OSAC) for Forensic Science for documents developed for forensic toxicology. Some terms may be used differently in other disciplines. Using this technical report as a normative reference in forensic toxicology standards, guidelines, and best practice recommendations drafted by the OSAC and developed by the ASB will negate the need to relist and define terms that are already contained within this report.

The overall intent of this technical report is to include terms used in various standards, guidelines, and best practice recommendations for consistency and consolidation. Terms and definitions needed at a detailed level for a specific standard, guideline, or best practice recommendation are defined within that document. As these documents go through the revision process, terms and definitions that apply at the higher level will be migrated from individual documents to this technical report. If a conflict exists between a definition in this report and a published ASB document, the definition in this document prevails.

The AAFS established the ASB in 2015 with a vision of safeguarding Justice, Integrity, and Fairness through consensus-based American National Standards. To that end, the ASB develops consensus-based forensic standards within a framework accredited by the American National Standards Institute (ANSI) and provides training to support those standards. ASB values integrity, scientific rigor, openness, due process, collaboration, excellence, diversity, and inclusion. ASB is dedicated to developing and making freely accessible the highest quality documentary forensic science consensus Standards, Guidelines, Best Practice Recommendations, and Technical Reports in a wide range of forensic science disciplines as a service to forensic practitioners and the legal system.

ASB is accredited by the American National Standards Institute (ANSI) according to ANSI's "Essential Requirements: Due Process Requirements for American National Standards."¹ ASB documents are developed by volunteers working in Consensus Bodies (CBs) and Working Groups (WGs) that conform to ANSI requirements of openness, transparency, due process, and consensus.

This document was prepared, revised, and finalized as a technical report by the Toxicology Consensus Body of the AAFS Standards Board.

Questions, comments, and suggestions for the improvement of this document can be sent to ASB Secretariat, asb@aafs.org or 410 N 21st Street, Colorado Springs, CO 80904.

All hyperlinks and web addresses shown in this document are current as of the publication date of this standard.

ASB procedures are publicly available, free of cost, at www.aafs.org/academy-standards-board.

DRAFT

1 Forensic Toxicology: Terms and Definitions

2 1 Scope

3 This document provides terms and definitions for use in standards, guidelines, and best practice
4 recommendations developed for forensic toxicology. The terms in this technical report apply to
5 documents published by the ASB Toxicology Consensus Body.

6 2 Normative References

7 There are no normative references for this document.

8 3 Terms and Definitions

9 The following terms and definitions apply to standards, guidelines, and best practice
10 recommendations developed for forensic toxicology and published by the ASB Toxicology
11 Consensus Body.

12 3.1

13 **accuracy** ^[4]

14 closeness of agreement between a measured quantity value and a true quantity value of a
15 measurement

16 3.2

17 **administrative review** ^[3]

18 evaluation of records to verify consistency with administrative policies and editorial correctness

19 3.3

20 **analyte**

21 chemical substance to be identified and/or measured

22 3.4

23 **analytes of interest**

24 drugs, drug metabolites, and other chemicals included within the analytical scope of a test method

25 3.5

26 **analytical run**

27 **“batch”**

28 set of case samples, controls, and/or calibrators that are contemporaneously prepared and/or
29 analyzed in a particular sequence

30 3.6

31 **analytical scope**

32 selection of drugs, drug metabolites, and other chemicals covered in an analytical strategy

33 3.7

34 **analytical sensitivity**

35 lowest amount of an analyte that can be reliably measured in a specimen by a laboratory test; may
36 be a decision point, a limit of detection, or a lower limit of quantitation

- 37 **3.8**
 38 **analytical strategy** ^[3]
 39 choice of methods and the sequence of analysis
- 40 **3.9**
 41 **bias (cognitive)** ^[6]
 42 tendency for an individual's preexisting beliefs, expectations, motives, or the situational context to
 43 influence their sampling, observations, results, interpretations, or opinions, or their confidence in
 44 the aforementioned
- 45 **3.10**
 46 **bias (measurement)**
 47 estimate of systematic measurement error, calculated as the difference between the mean of
 48 several measurements under identical conditions, to a known "true" value
- 49 **3.11**
 50 **bias (statistical)** ^[6]
 51 systematic tendency for estimates or measurements to be above or below their true values
- 52 NOTE 1 Statistical bias arises from systematic as opposed to random error.
 53 NOTE 2 Statistical biases can occur in the absence of prejudice, partiality, or discriminatory intent.
- 54 **3.12**
 55 **blank matrix sample**
 56 biological fluid (e.g., blood, urine, bile, serum, vitreous humor, oral fluid), tissue, or synthetic
 57 substitute without target analyte or internal standard
- 58 **3.13**
 59 **breath alcohol program**
 60 organizational structure including policies, procedures, responsibilities, and resources necessary
 61 for implementing core breath alcohol activities
- 62 NOTE The Breath Alcohol Program includes, but may not be limited to, requirements or specifications for
 63 reference materials, training of operators, maintenance and calibration of instrumentation, the evidential
 64 breath alcohol test sequence, and record retention.
- 65 **3.14**
 66 **calibration** ^[4 (modified)]
 67 operation that, under specified conditions, establishes a relationship between the concentration of
 68 analyte and the corresponding instrument response
- 69 **3.15**
 70 **calibration model**
 71 mathematical model that represents the relationship between the known concentration of analyte
 72 and the corresponding instrument response
- 73 **3.16**
 74 **calibrator** ^[1]
 75 measurement standard used in calibration

- 76 **3.17**
77 **carryover**
78 detection of unintended analyte signal in a sample after the analysis of a positive sample containing
79 that analyte
- 80 **3.18**
81 **case file** ^[3]
82 forensic service provider's collection of all records detailing the forensic process including reports
83 related to a case
- 84 **3.19**
85 **certified reference material** ^[1]
86 **CRM**
87 reference material characterized by a metrologically valid procedure for one or more specified
88 properties, accompanied by a certificate that provides the value of the specified property, its
89 associated uncertainty, and a statement of metrological traceability
- 90 **3.20**
91 **chain of custody** ^[3]
92 chronological record of the transfer, handling, and storage of an item from its point of collection to
93 its final return or disposal
- 94 **3.21**
95 **chromatography** ^[5]
96 physical method of separation in which the components to be separated are distributed between
97 two phases, one of which is stationary (stationary phase) while the other (mobile phase) moves in a
98 definite direction
- 99 **3.22**
100 **concurrently analyzed**
101 analyzed at or close to the same time under the same analytical conditions (i.e., same instrument
102 and instrumental parameters)
- 103 **3.23**
104 **consensus result**
105 value that serves as an agreed-upon reference for comparison that is based on the results of
106 laboratories participating in the proficiency test
- 107 **3.24**
108 **control**
109 material of known composition that is analyzed along with unknown sample(s) in order to evaluate
110 the performance of an analytical procedure
- 111 **3.25**
112 **court-ordered toxicological testing**
113 analysis of specimens from subjects involved in probation and parole, drug courts, or child
114 protective services to determine the presence (or absence) of chemical substances and their effects
115 on the average individual

- 116 **3.26**
117 **customer** ^[3 (modified)]
118 authority, organization, and/or person(s) requesting forensic toxicology services
- 119 **3.27**
120 **data**
121 see *observation*
- 122 **3.28**
123 **decision point**
124 administratively defined cutoff concentration that is at or above the method's analytical detection
125 limit
- 126 **3.29**
127 **diagnostic ion**
128 MS or MS/MS molecular ion or fragment ion whose presence and relative abundance are
129 characteristic of the targeted analyte
- 130 **3.30**
131 **drug-facilitated crime**
132 **DFC**
133 when an individual is victimized while mentally or physically incapacitated due to the effects of
134 ethanol and/or other drugs
- 135 **3.31**
136 **examination** ^[3 (modified)]
137 part of the forensic toxicology process consisting of the analysis of specimen(s) and the
138 interpretation of observations from the analysis
- 139 **3.32**
140 **high-resolution mass spectrometry**
141 **HRMS**
142 acquisition of data using a mass spectrometer that can give at least 10,000 nominal mass resolving
143 power at the full width of the peak at half its maximum height (FWHM) for the compound of
144 interest
- 145 **3.33**
146 **human performance toxicology**
147 analysis of specimens for driving while impaired cases, drug-facilitated crimes, and other
148 impairment cases to determine the presence (or absence) of chemical substances and their effects
149 on the average individual
- 150 **3.34**
151 **identification** ^[3]
152 Assignment to the most specific class attainable
- 153 NOTE In forensic toxicology, identification refers to determining the presence of drugs, chemicals, or toxins
154 within a biological sample.

- 155 **3.35**
156 **immunoassay**
157 analytical test that relies upon the interaction between antibodies and antigens (e.g., drugs or drug
158 metabolites)
- 159 **3.36**
160 **interferences**
161 compounds (e.g., matrix components, other drugs, metabolites, internal standard, and impurities),
162 which may impact the ability to detect, identify, or quantitate a targeted analyte
- 163 **3.37**
164 **interpretation**
165 explanations for the observations and calculations
- 166 NOTE In forensic toxicology, interpretations are considered reported findings.
- 167 **3.38**
168 **ion ratio**
169 in mass spectrometry, the ratio of the instrument responses between two previously identified
170 diagnostic ions
- 171 **3.39**
172 **ionization**
173 physicochemical process of producing a gas-phase ion
- 174 NOTE This typically occurs within the ion source in the mass spectrometer. Several mechanisms of ionization
175 exist, such as chemical and electron ionization.
- 176 **3.40**
177 **isomers** ^[5]
178 compounds that have the same elemental formula but have different structural configurations and
179 thus different physical and/or chemical properties
- 180 **3.41**
181 **laboratory-developed test method**
182 type of non-standard test method designed and used within a single laboratory or laboratory
183 system
- 184 **3.42**
185 **limit of detection**
186 **LOD**
187 estimate of the lowest concentration of an analyte in a sample that can be reliably differentiated
188 from blank matrix and meets identification criteria for the analytical method
- 189 **3.43**
190 **low-resolution mass spectrometry**
191 **LRMS**
192 acquisition of data using a mass spectrometer limited to nominal mass resolution measurements

- 193 **3.44**
194 **lower limit of quantitation**
195 **LLOQ**
196 estimate of the lowest concentration of an analyte in a sample that can be reliably measured with
197 acceptable bias and precision
- 198 **3.45**
199 **mass spectrometry** ^[5]
200 **MS**
201 study of matter through the formation of gas-phase ions that are characterized using mass
202 spectrometers by their mass, charge, structure, and/or physicochemical properties
- 203 **3.46**
204 **matrix**
205 specific biological fluid (e.g., blood, plasma, serum, urine, oral fluid, vitreous fluid), hair, tissue, or
206 non-human/animal substitute
- 207 **3.47**
208 **measurement uncertainty**
209 **(uncertainty of measurement)**
210 estimate of the potential variability of a quantitative measurement based on the information known
211 about the measurand and the measurement method
- 212 **3.48**
213 **method development**
214 process by which analytical parameters are established for a non-standard test method, laboratory-
215 developed test method, or standard test method used outside its intended scope (or otherwise
216 modified) that considers sample preparation, instrumental conditions, interpretation of
217 observations, data or calculations, and metrological traceability
- 218 **3.49**
219 **method of standard addition**
220 **MSA**
221 quantitative procedure by which known concentrations of target analyte are added to multiple
222 aliquots of the case sample(s)
- 223 **3.50**
224 **method validation**
225 process of performing a set of experiments to establish objective evidence that a non-standard test
226 method, laboratory-developed test method, or standard test method used outside its intended
227 scope (or otherwise modified) is fit for purpose and to identify limitations under normal operating
228 conditions
- 229 **3.51**
230 **method verification**
231 process by which a laboratory establishes objective evidence of its ability to use a non-standard test
232 method, laboratory-developed test method, or standard test method within its intended scope to
233 achieve the method's defined performance specifications

- 234 **3.52**
 235 **metrological traceability** ^[1]
 236 **(measurement traceability)**
 237 property of a measurement result whereby the result can be related to a reference through a
 238 documented unbroken chain of calibrations, each contributing to the measurement uncertainty
- 239 **3.53**
 240 **molecular ion** ^[5]
 241 ion formed by the removal of one or more electrons from a molecule to form a positive ion or the
 242 addition of one or more electrons to a molecule to form a negative ion
- 243 **3.54**
 244 **MSⁿ** ^[5]
 245 multiple-stage mass spectrometry experiments designed to record product ion spectra where n is
 246 the number of product ion stages (nth-generation product ions)
- 247 **3.55**
 248 **multiple reaction monitoring** ^[5]
 249 **MRM**
 250 application of selected reaction monitoring to multiple product ions from one or more precursor
 251 ions
- 252 **3.56**
 253 **nominal mass** ^[5]
 254 mass of a molecular ion or molecule calculated using the isotope mass of the most abundant
 255 constituent element isotope of each element rounded to the nearest integer value and multiplied by
 256 the number of atoms of each element
- 257 **3.57**
 258 **nominal quantity value** ^[4]
 259 rounded or approximate value of a characterizing quantity of a measuring instrument or measuring
 260 system that provides guidance for its appropriate use
- 261 **3.58**
 262 **non-regulated workplace drug testing**
 263 non-federally mandated analysis of specimens from employees to determine the presence (or
 264 absence) of specific chemical substances and their effects on the average individual
- 265 **3.59**
 266 **non-standard test method**
 267 defined test procedure that is used to generate test results and published by an entity other than a
 268 national or international standards development organization
- 269 NOTE Non-standard test methods include those from vendors, scientific journals, standard practices or
 270 guides, and laboratory-developed methods.

- 271 **3.60**
272 **observation (data)** [3 (modified)]
273 results of analysis of items
- 274 NOTE An observation can result from human-perception-based analysis, instrumental analysis, or a
275 combination of the two.
- 276 **3.61**
277 **opinion**[6]
278 view, judgment, or belief that considers other information in addition to observations, data,
279 calculations, and interpretations
- 280 **3.62**
281 **postmortem toxicology**
282 analysis of specimens from decedents in medicolegal death investigations to determine the
283 presence (or absence) of chemical substances and their role, if any, in the cause of death
- 284 **3.63**
285 **precision**
286 measure of the closeness of agreement between a series of measurements obtained from multiple
287 samplings of the same or similar homogenous samples
- 288 **3.64**
289 **precursor ion** [5 (modified)]
290 ion that reacts to form particular product ions or undergoes specified neutral losses
- 291 **3.65**
292 **presumptive positive**
293 analytical result that, on its own, does not achieve the minimum points for the identification of a
294 substance
- 295 NOTE See ANSI/ASB Standard 113: *Standard for Identification Criteria in Forensic Toxicology* for a complete
296 discussion of identification points.
- 297 **3.66**
298 **product ion** [5 (modified)]
299 ion formed as the product of a reaction involving a precursor ion
- 300 **3.67**
301 **proficiency testing** [2 (modified)]
302 evaluation of participant performance against pre-established criteria by means of interlaboratory
303 comparison
- 304 **3.68**
305 **qualitative method**
306 assay designed to determine the presence (or absence) of an analyte within a sample relative to an
307 established threshold
- 308 **3.69**
309 **quantitative method**
310 assay designed to measure the concentration of an analyte within a sample

- 311 **3.70**
312 **reference material** [4]
313 material, sufficiently homogenous and stable with reference to specified properties, which has been
314 established to be fit for its intended use in a measurement or in examination of nominal properties
- 315 **3.71**
316 **regression**
317 set of statistical processes for estimating the relationships between a dependent variable and one
318 or more independent variables (e.g., linear, quadratic, simple, etc.)
- 319 **3.72**
320 **repeatability**[4, (modified)]
321 measurement precision under a set of conditions that includes the same measurement procedure,
322 same operators, same measuring system, same operating conditions, and same location, and
323 replicate measurements on the same or similar objects over a short period of time
- 324 **3.73**
325 **reporting range**
326 concentrations that can be reliably measured by an analytical procedure that will be reported per
327 the specifications of the laboratory, breath alcohol program, or its customers.
- 328 **3.74**
329 **reproducibility**
330 measurement precision under a set of conditions that includes different locations, operators,
331 measuring systems, and replicate measurements on the same or similar objects
- 332 **3.75**
333 **results**
334 the product of the forensic service provider
- 335 NOTE 1 The term is broad and includes observations, calculations, interpretations, and opinions.
336 NOTE 2 In forensic toxicology, test/calibration results (observations, calculations, and interpretations) are
337 often separated from opinion results.
- 338 **3.76**
339 **selected ion monitoring** [5]
340 **SIM**
341 operation of a mass spectrometer in which the abundances of ions of one or more specific m/z
342 values are recorded rather than the entire mass spectrum
- 343 **3.77**
344 **selected reaction monitoring** [5]
345 **SRM**
346 data acquired from one or more specific product ions corresponding to m/z selected precursor ions
347 recorded via two or more stages of mass spectrometry
- 348 **3.78**
349 **specificity**
350 ability of a method to distinguish between the targeted analyte and other non-targeted substances

- 351 **3.79**
352 **specimen**
353 matrix sample collected from a specific origin for toxicological analysis (e.g., femoral or cardiac
354 blood, left versus right eye vitreous fluid, and liver, brain, or kidney)
- 355 **3.80**
356 **stability**
357 analyte's resistance to chemical change in a matrix under specific conditions for given time
358 intervals
- 359 **3.81**
360 **standard test method**
361 defined test procedure published by national or international standards development organizations
362 that is used unmodified to generate test results
- 363 NOTE Examples of standard test methods include, but are not limited to, identification, measurement, and
364 evaluation of one or more qualities, characteristics, or properties. Standard test methods include precision
365 and bias statements.
- 366 **3.82**
367 **tandem mass spectrometry** ^[5]
368 **MS/MS**
369 acquisition and study of the spectra of the product ions or precursor ions of m/z selected ions, or of
370 precursor ions of a selected neutral mass loss
- 371 **3.83**
372 **technical review** ^[3]
373 evaluation of all supporting records from the examination and the report, if prepared, to evaluate
374 observations and assess whether there is an appropriate and sufficient basis for any opinions
- 375 **3.84**
376 **upper limit of quantitation**
377 **ULOQ**
378 highest concentration of an analyte in a sample that can be reliably measured with acceptable bias
379 and precision
